INDEX TO SUBJECTS

ABSORPTION spectrum of visual purple, 411
Acids, amino, dissolved and crystalline, isoelectric points, comparison, 729
—, amino, peptides, and related substances, physical chemistry, 651
Adsorption of proteins at oil-water interfaces and artificial protein-lipoid membranes, 745
Amino acids, dissolved and crystalline, isoelectric points, comparison, 729
— acids, peptides, and related substances, physical chemistry, 651
Ammonia, replacement by sodium and potassium, 665
Anax larvae, critical intensity and flash duration for response to flicker, 463
— larvae, response to flickered light, critical illumination in relation to area of eye, 223
Arbacia egg, fertilized, suspensions, electric impedance, 583
Auxins, effect on protoplasmic streaming, 123, 439
Axon, giant, squid, transverse electric impedance, 757

BACTERIA, purple, rate of carbon dioxide assimilation at various wave lengths of light, 71
Bacterial growth, factors limiting, cell size and physiologic youth in *Bacterium coli* cultures, 721
— growth and phage production, relationship, 137
Bacteriophage, concentration and purification, 335
— production and bacterial growth, relationship, 137
—, staphylococcus, concentrated preparations, ultracentrifugal analysis, 367
Bacteriophage-bacterium reaction, effect of sodium chloride, 1
Bacterium coli cultures, cell size and physiologic youth, 721
— *gallinarum*, measurement of surface films formed by, 621
Bacterium-bacteriophage reaction, effect of sodium chloride, 1
Bioelectric potentials, calculations, 541
Blood serum. *See* Serum.

CAPILLARY tubes, effect of diffusion gradients brought about by *Fucus* eggs in, 57
Carbon dioxide assimilation by purple bacteria, rate at various wave lengths of light, 71
Cell size and physiologic youth in *Bacterium coli* cultures, 721
Centrifuge, ultra-, analysis of concentrated staphylococcus bacteriophage preparations, 367
Chemical mediation of nerve impulses, theory, and choline esterase, 431
Chemistry, histo-, enzymatic, 289, 297
— of rods and visual adaptation, 93
—, physical, of amino acids, peptides, and related substances, 651

Choline esterase, histological distribution in gastric mucosa normally and after administration of drugs, 297
— esterase, micro method for determination, and activity-hydrogen ion concentration relationship, 289
— esterase and theory of chemical mediation of nerve impulses, 431
Colpoda duodenaria, excystment, kinetics, 475
Crystallization, isolation, and properties of swine pepsinogen, 501
Cultivation, *Bacterium coli*, cell size and physiologic youth, 721
Cystine, solubility in presence of ions and another dipolar ion, 651

DIFFUSION effect upon ionic distribution, 107
— gradients brought about by *Fucus* eggs in capillary tubes, effect upon induction of polarity, 57
Dineutes, dark adaptation, 375
Dragonfly larvae, response to flickered light, critical illumination in relation to area of eye, 223
Drugs, histological distribution of choline esterase in gastric mucosa normally and after administration of, 297

EGG, *Arbacia*, fertilized, suspensions, electric impedance, 583
Eggs, *Fucus*, in capillary tubes, effect of diffusion gradients brought about by, 57
—, *Fucus*, induction of polarity, effect of hydrogen ion concentration, 57, 833
—, marine, single, electric impedance, 591
Electric impedance of fertilized *Arbacia* egg suspensions, 583
Electric impedance of single marine eggs, 591
— impedance, transverse, of *Nitella*, 189
— impedance, transverse, of squid giant axon, 757
Electrokinetic phenomena, 729
Electrolytes, accumulation, 665, 687, 767, 775
Enzymatic histochemistry, 289, 297
Enzyme, choline esterase, micro method for determination, and activity-hydrogen ion concentration relationship, 289
— produced by *Penicillium*, formation of trypsin from trypsinogen by, 601
Esterase, choline, histological distribution in gastric mucosa normally and after administration of drugs, 297
—, choline, micro method for determination, and activity-hydrogen ion concentration relationship, 289
—, choline, and theory of chemical mediation of nerve impulses, 431
Excitability of frog muscle with particular reference to latent addition, 557
Excitation of nerve fibers in squid, *Loligo pealii*, 781
— theories of Rashevsky and Hill, 89
Excystment in *Colpoda duodenaria*, kinetics, 475
Eye, dragonfly larvae, response to flickered light, critical illumination in relation to area of eye, 223

FERTILIZED *Arbacia* egg suspensions, electric impedance, 583
Fibers, nerve, squid, *Loligo pealii*, excitation, 781

Fishes, related, critical illumination and flicker frequency, 17
Fowl pepsin, transformation of swine pepsinogen into swine pepsin by, 575
Fucus eggs, induction of polarity, effect of hydrogen ion concentration, 57, 833

GASTRIC. *See* Stomach.
Globulin, serum, phase rule study, 249
Guaiacol, effects in *Halicystis*, 707

HALICYSTIS, effects of guaiacol, 707
— potential, effects of potassium, 631
— and *Valonia*, accumulation of iodine by, 687
— and *Valonia*, accumulation of nitrate by, 767
Halide and nitrate, accumulation by *Valonia* in hypertonic solutions, 775
Hemocyanin, measurement of surface films formed by, 621
Hill, excitation theory, 89
Histochemistry, enzymatic, 289, 297
Histological distribution of choline esterase in gastric mucosa normally and after administration of drugs, 297
Hydrogen ion concentration, effect upon induction of polarity in *Fucus* eggs, 57, 833
— ion concentration-activity relationship of choline esterase, 289
Hypertonic solutions, accumulation of halide and nitrate by *Valonia* in, 775

IODINE, accumulation by *Halicystis* and *Valonia*, 687
Ionic distribution, diffusion effect, 107
— mobilities in protoplasm, changes, 707
Ions, solubility of cystine in presence of another dipolar ion and, 651
Isoelectric points of dissolved and crystalline amino acids, 729

KINETICS of excystment in *Colpoda duodenaria*, 475

LARVAE, *Anax*, critical intensity and flash duration for response to flicker with, 463
—, dragonfly, response to flickered light, critical illumination in relation to area of eye, 223
Light, flickered, critical illumination for response with dragonfly larvae, in relation to area of eye, 223
—, various wave lengths, rate of carbon dioxide assimilation by purple bacteria, 71
Lipoid-protein membranes, artificial, and adsorption of proteins at oil-water interfaces, 745
Loligo pealii, excitation of nerve fibers, 781

MEMBRANES, protein-lipoid, artificial, and adsorption of proteins at oil-water interfaces, 745
Micro method for determination of choline esterase, 289
Mold, *Penicillium*, formation of trypsin from trypsinogen by enzyme produced by, 601
Mosaic, tobacco, virus, measurement of surface films formed by, 621
Mucosa, gastric, histological distribution of choline esterase normally and after administration of drugs, 297
Muscle, frog, excitability, with particular reference to latent addition, 557

NERVE fibers in squid, *Loligo pealii*, excitation, 781
— impulses, chemical mediation theory, and choline esterase, 431
Nitella, concentration potential of potassium chloride, 541
—, transverse electric impedance, 189
Nitrate, accumulation by *Valonia* and *Halicystis*, 767
— and halide, accumulation by *Valonia* in hypertonic solutions, 775

OIL-WATER interfaces, adsorption of proteins at, and artificial protein-lipoid membranes, 745

PENICILLIUM, formation of trypsin from trypsinogen by enzyme produced by, 601
Pepsin, swine, transformation of swine pepsinogen by chicken pepsin into, 575
Pepsinogen, swine, isolation, crystallization, and properties, 501
—, swine, transformed into swine pepsin by chicken pepsin, 575
Peptides, amino acids, and related substances, physical chemistry, 651
Phase rule study of serum proteins, 249
Photosynthesis, induction period, 151
Physical chemistry of amino acids, peptides, and related substances, 651
Physiologic youth and cell size in *Bacterium coli* cultures, 721
Polarity in *Fucus* eggs, induction, effect of hydrogen ion concentration, 57, 833
Potassium chloride in *Nitella*, concentration potential, 541
Potassium, effects on *Halicystis* potential, 631
— and sodium, replacement of ammonia by, 665
Potassium-rich sea waters, diluted, potential differences with *Valonia*, 383
Potential, bioelectric, calculations, 541
— differences with *Valonia* with diluted potassium-rich sea waters, 383
—, *Halicystis*, effects of potassium, 631
Protein-lipoid membranes, artificial, and adsorption of proteins at oil-water interfaces, 745
Proteins, adsorption at oil-water interfaces, and artificial protein-lipoid membranes, 745
—, serum, phase rule study, 249
Protoplasm, ionic mobilities, changes, 707
Protoplasmic streaming, effect of auxins, 123, 439

RASHEVSKY, excitation theory, 89
Rhodopsin in solution, 795
Rods, chemistry, and visual adaptation, 93

SERUM proteins, phase rule study, 249
Sodium chloride, effect on phage-bacterium reaction, 1
— and potassium, replacement of ammonia by, 665
Spectrum, absorption, of visual purple, 411
Squid giant axon, transverse electric impedance, 757
—, *Loligo pealii*, excitation of nerve fibers, 781
Staphylococcus bacteriophage preparations, concentrated, ultracentrifugal analysis, 367
Stomach, mucosa, histological distribution of choline esterase nor-

mally and after administration of drugs, 297
Sucrose inversion by bakers' yeast as function of temperature, 695
Sunfish, critical illumination and flicker frequency as function of flash duration, 313
Swine pepsin, transformation of swine pepsinogen by chicken pepsin into, 575
— pepsinogen, isolation, crystallization, and properties, 501
— pepsinogen transformed into swine pepsin by chicken pepsin, 575

TEMPERATURE, sucrose inversion by bakers' yeast as function of, 695
Tobacco mosaic virus, measurement of surface films formed by, 621
Trypsin, formation from trypsinogen by enzyme produced by *Penicillium*, 601
Trypsinogen, formation of trypsin by enzyme produced by *Penicillium*, 601

ULTRACENTRIFUGAL analysis of concentrated staphylococcus bacteriophage preparations, 367

VACCINIA, measurement of surface films formed by, 621
Valonia, accumulation of halide and nitrate in hypertonic solutions, 775
Valonia, concentration effect, 383
— and *Halicystis*, accumulation of iodine by, 687
— and *Halicystis*, accumulation of nitrate by, 767
Virus, tobacco mosaic, measurement of surface films formed by, 621
Vision, absorption spectrum of visual purple, 411
—, acuity, relation between illumination and, 165
—, adaptation and chemistry of rods, 93
—, brightness discrimination as function of duration of increment in intensity, 635
—, critical illumination and flicker frequency as function of flash duration for sunfish, 313
—, critical illumination and flicker frequency in related fishes, 17
—, critical intensity and flash duration for response to flicker with *Anax* larvae, 463
—, intensity and critical frequency for flicker, 203
—, threshold and area, 269

WATER-OIL interfaces, adsorption of proteins at, and artificial protein-lipoid membranes, 745
Waters, sea, diluted, potassium-rich, potential differences with *Valonia*, 383

YEAST, bakers', sucrose inversion as function of temperature, 695
